

Weekly Mosaic – Continued Easing

Week of October 27th, 2025

0.20%

Core CPI, Seasonally Adjusted, Month-over-Month

The delayed release of the Consumer Price Index was well received as the month-over-month measure came in below the anticipated +0.30%. Encouragingly, shelter-related components are starting to show signs of cooling.

54.8

S&P Global PMI Services, Seasonally Adjusted (Preliminary)

An early look at global economic activity for the month of October showed improvement. Manufacturing activity inched up to 52.2 from the previous 52.0, and Services accelerated from 54.2 to 55.2.

4,060K

Existing Home Sales, Seasonally Adjusted Annual Rate

Existing home sales in September came in lighter than the anticipated 4,100K but improved from August's reading of 4,000K. While mortgage rates remain elevated, they have been trending lower since May of this year.

Top of Mind

It's highly anticipated that the Federal Reserve will cut the official policy interest rate by 0.25% this week, marking the second consecutive meeting that they've elected to ease monetary policy.

Many are quick to point out that, due to the ongoing shutdown, the Fed is moving forward with easing policy despite a lack of economic data, such as the latest nonfarm payrolls and the unemployment rate, which are released by various government entities, such as the Bureau of Labor Statistics.

While there has certainly been a drop in the volume of data released by government entities, the Fed and the market have plenty of alternative data sources to inform decision-making in the absence of the heavily revised establishment data.

Financial conditions remain easy. On a year-over-year basis, the prices of energy (measured by crude oil), the US dollar, and the 2-year Treasury yield are all lower. Furthermore, despite lingering concerns in areas of the credit market, credit spreads for investment-grade corporate borrowers remain near the low end of their historical range.

In addition to the anticipated rate cut, the Fed will likely provide further insights into its framework for ending its efforts to reduce its balance sheet, signaling additional easing.

Index Returns

As of 10/24/2025 (%)	1-Week	QTD	YTD	1-Year	3-Year
S&P 500 TR	1.93	1.61	16.68	18.43	23.19
Russell Mid Cap TR	1.99	0.68	11.17	11.21	16.30
Russell 2000 TR	2.51	3.20	13.92	14.83	14.52
MSCI EAFE NR	1.25	1.64	27.19	22.19	21.23
MSCI EM NR	2.05	3.26	31.69	24.99	21.01
Bloomberg US Agg Bond TR	0.17	1.20	7.41	6.39	6.27
Bloomberg Intermediate Corporate Bond TR	0.18	0.84	7.47	7.25	7.71

Price Levels

	10/24/2025	1 Mo	3 Mo	6 Mo	1-Year
US Dollar Index	98.95	97.87	97.65	99.47	104.06
10 Year Treasury Yield	3.99	4.14	4.38	4.26	4.20
West Texas Crude (WTI) \$/bbl	61.47	65.40	66.38	63.85	70.58

Current Positioning

Cautiously optimistic while intentionally avoiding some of the most expensive areas of the equity and credit markets.

	Min		Neutral		Max	
EQUITIES						Guarding against elevated levels of complacency and stretched valuations.
U.S. Equity						Relative advantages remain attractive; however, valuations have become less attractive. Our longstanding overweight to US equities relative to international equities remains.
Large						The balance sheet strength of many large cap companies remains attractive. However, their valuations are among the richest relative to other segments of US and international equities.
Mid						Absolute and relative valuations combined with a higher percentage of domestically driven supply chains and sales, combine to position mid-cap stocks attractive.
Small						Valuations continue to remain attractive against large caps and stand to benefit from less onerous regulations. Within small caps, we are focused on quality companies able to navigate an elevated interest rate environment.
Value						Overweight Energy and Financials while avoiding the cheapest valued companies, leading us away from deep value sectors and industries.
Growth						Driven by an underweight to Consumer Discretionary and Communication Services, neutral weight Technology.
International						International equity valuations are attractive and central banks around the world have largely shifted toward easing monetary policy.
Developed Markets						Overweight Japanese and Eurozone equities relative to benchmark.
Emerging Markets						Attractive valuations, global monetary easing, and stimulative measures in China, position emerging Asian equities to potentially benefit from multiple tailwinds.

FIXED INCOME						We believe opportunities within fixed income markets are attractive over the mid- to long-term time periods while recognizing volatility could persist over the short-term.
Duration						Slightly underweight duration as uncertainty around growth and inflation persist.
Treasury						Neutral US Treasuries, favor the securitized sector.
Corporate						Prefer short-term and intermediate-term investment grade corporate credit relative to long-term. High-quality bias remains with little value offered in the form of spreads across the high yield universe.
MBS/Securitized						Attractive relative yield, adequate spreads, and strong implied credit quality position the asset class attractively, specifically residential mortgages.

ALTERNATIVES						
Commodities						A persistent lack of a durable geopolitical risk premium, lower global trade, and slower global economic growth combine for a challenging environment for commodities moving forward.

CASH						Excess cash position is being driven by our active underweight to international equities.

Indices are unmanaged. An investor cannot invest directly in an index. They are shown for illustrative purposes only, and do not represent the performance of any specific investment. Index returns do not include any expenses, fees or sales charges, which would lower performance.

The S&P 500® Index is a large-cap market index which measures the performance of a representative sample of 500 leading companies in leading industries in the U.S.

The Russell Midcap® Index measures the performance of the mid-cap segment of the U.S. equity universe.

The Russell 2000® Index measures the performance of the 2,000 smallest companies in the Russell 3000® Index, which represents approximately 11% of the total market capitalization of the Russell 3000® Index.

Russell Investment Group is the source and owner of the trademarks, service marks and copyrights related to the Russell Indexes. Russell® is a trademark of Russell Investment Group.

The MSCI EAFE (Europe, Australasia & Far East) Index is a free-float adjusted market capitalization index that is designed to measure developed market equity performance, excluding the U.S. and Canada.

The MSCI Emerging Markets Index captures large and mid cap representation across 24 Emerging Markets (EM) countries. With 1,138 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in each

The Bloomberg U.S. Aggregate Bond Index is a broad-based flagship benchmark that measures the investment grade, U.S. dollar-denominated, fixed-rate taxable bond market. The index includes Treasuries, government-related and corporate securities, mortgage backed securities, asset-backed securities and corporate securities, with maturities greater than one year.

The Bloomberg Commodity Total Return Index (BCOM) is composed of futures contracts and reflects the returns on a fully collateralized investment in the BCOM. This combines the returns of the BCOM with the returns on cash collateral invested in 13 week (3 Month) U.S. Treasury Bills.

The Bloomberg US Corporate High Yield Bond Index measures the USD-denominated, high yield, fixed-rate corporate bond market. Securities are classified as high yield if the middle

rating of Moody's, Fitch and S&P is Ba1/BB+/BB+ or below. Bonds from issuers with an emerging markets country of risk, based on Barclays EM country definition, are excluded.

The Bloomberg US Intermediate Corporate Bond Index measures performance of United States dollar-denominated investment grade, fixed-rate, taxable corporate bond securities with maturities greater than or equal to one year, but less than ten years, that are issued by U.S and non-U.S. industrial, utility and financial issuers.

Although the information in this report has been obtained from sources that the firm believes to be reliable, we do not guarantee its accuracy, and any such information may be incomplete or condensed. All opinions included in this report constitute the firm's judgment as of the date of this report and are subject to change without notice.

All investing involves risks including the possible loss of principal. There can be no assurance the asset allocation portfolios will achieve their investment objectives. The portfolios may invest in equities which are subject to market volatility. In addition to the general risk of investing, the portfolio is subject to additional risks including investing in bond and debt securities, which includes credit risk, prepayment risk and interest rate risk. When interest rates rise, bond prices generally fall. Securities rated below investment grade are more sensitive to economic, political and adverse development changes.

Equity risk is the risk that securities held by the fund will fluctuate in value due to general market or economic conditions, perceptions regarding the industries in which the issuers of securities held by the fund participate, and the particular circumstances and performance of particular companies whose securities the fund holds. In addition, while broad market measures of common stocks have historically generated higher average returns than fixed income securities, common stocks have also experienced significantly more volatility in those returns.

Commodity values can be very volatile. They can be impacted by world or local events, government regulations and economic conditions. Investments in commodities can lose value.

Each portfolio is subject to the risks and expenses of the underlying funds in direct proportion to the allocation of assets among the underlying funds.

Upon request, Madison may furnish to the client or institution a list of all security recommendations made within the past year.

The Consumer Price Index (CPI) is a measure of the average change over time in the prices paid by urban consumers for a market basket of consumer goods and services.

Purchasing Managers' Index™ (PMI™) is a survey-based economic indicator designed to provide a timely insight into business conditions.

The federal funds rate is the target interest rate range set by the Federal Open Market Committee (FOMC) for banks to lend or borrow excess reserves overnight. It influences monetary and financial conditions, short-term interest rates, and the stock market.

Bond Spread is the difference between yields on differing debt instruments of varying maturities, credit ratings, and risk, calculated by deducting the yield of one instrument from another.
