

Weekly Mosaic – Shift in Focus

Week of August 25th, 2025

55.4

PMI Composite,
Seasonally Adjusted
(Preliminary)

An early look at economic activity in July surprised to the upside as both manufacturing and services came in ahead of expectations. Encouragingly, manufacturing activity reached its highest level since 2022.

+0.2%

Coincident
Economic Index,
Month-over-Month

The Conference Board's Leading Economic Index continued its downward decline in July, falling by -0.1%. However, the Coincident Economic Index improved in July as all components except industrial production improved.

50.5

Manufacturing PMI,
Eurozone,
Seasonally Adjusted
(Preliminary)

In a positive development, manufacturing activity in the Eurozone moved into expansion after being stuck in contraction since 2022. Additionally, the European Central Bank is likely to keep easing monetary policy as inflation continues to moderate.

Top of Mind

In the Federal Reserve Chairman's speech at the Jackson Hole Symposium on Friday, he referenced that the downside risks to the labor market are now greater than the risks to higher inflation, with price pressures from tariffs being described as a one-time shift.

Also, in his address, he noted that the Fed views the current policy rate 1.0% above what they believe to be neutral, implying that they see the current target range of 4.25 – 4.50% as restrictive.

The shift in focus from inflation to the labor market, along with policymakers viewing their current stance as restrictive, seemingly solidified the probability of an interest rate cut at the next Fed meeting in September.

Asset prices responded favorably to the shift in focus, as heading into Friday's speech, the probability of a rate cut at the September meeting had been fading.

While most asset classes ended the week on a high note, the Magnificent 7 stocks, which have been the huge market leaders over the last few years, lagged as the market broadened out.

A shift in the Fed's focus, spurring them to re-engage in easing monetary policy, could provide a durable catalyst for the market to continue to broaden out.

Index Returns

As of 8/22/2025 (%)	1-Week	QTD	YTD	1-Year	3-Year
S&P 500 TR	0.30	4.40	10.88	17.63	17.80
Russell Mid Cap TR	2.08	4.53	9.59	14.92	12.27
Russell 2000 TR	3.32	8.77	6.82	11.37	8.82
MSCI EAFE NR	0.84	4.30	24.58	17.42	16.45
MSCI EM NR	-0.41	4.04	19.93	17.61	11.20
Bloomberg US Agg Bond TR	0.43	0.77	4.82	2.86	2.71

Bloomberg High Yield Corporate TR	0.27	1.25	5.88	8.27	8.48
Bloomberg Commodities TR	1.33	0.24	5.78	11.53	-1.65

Price Levels

	8/22/2025	1 Mo	3 Mo	6 Mo	1-Year
US Dollar Index	97.72	97.21	99.11	106.61	101.51
10 Year Treasury Yield	4.26	4.39	4.51	4.42	3.86
West Texas Crude (WTI) \$/bbl	63.67	66.05	62.89	70.72	73.72

Current Positioning

Cautiously optimistic while intentionally avoiding some of the most expensive areas of the equity and credit markets.

	Min		Neutral		Max	
EQUITIES						Guarding against elevated levels of complacency and stretched valuations.
U.S. Equity						Relative advantages remain attractive; however, valuations remain full. Our longstanding overweight to US equities relative to international equities remains.
Large						The balance sheet strength of many large cap companies remains attractive. However, their valuations are among the richest relative to other segments of US and international equities.
Mid						Absolute and relative valuations combined with a higher percentage of domestically driven supply chains and sales, combine to position mid-cap stocks attractive.
Small						Valuations continue to remain attractive against large caps and stand to benefit from less onerous regulations and lower interest rates. We are focused on quality companies within our allocation to small caps.
Value						Overweight Financials while avoiding the cheapest valued companies, leading us away from deep value sectors and industries.
Growth						Driven by an underweight to Consumer Discretionary and Communication Services, neutral weight Technology.
International						International equity valuations are attractive and central banks around the world have largely shifted toward easing monetary policy.
Developed Markets						Overweight Japanese and Eurozone equities relative to benchmark.
Emerging Markets						Attractive valuations, global monetary easing, and stimulative measures in China, position emerging Asian equities to potentially benefit from multiple tailwinds.

FIXED INCOME						We believe opportunities within fixed income markets are attractive over the mid- to long-term time periods while recognizing volatility could persist over the short-term.
Duration						Slightly underweight duration as uncertainty around growth and inflation persist.
Treasury						Neutral US Treasuries, favor the securitized sector.
Corporate						Prefer short-term and intermediate-term investment grade corporate credit relative to long-term. High-quality bias remains with little value offered in the form of spreads across the high yield universe.
MBS/Securitized						Attractive relative yield, adequate spreads, and strong implied credit quality position the asset class attractively, specifically residential mortgages.

ALTERNATIVES						
Commodities						A growing possibility of a quieter geopolitical sphere and a lack of geopolitical risk premium in energy-based commodities combine for a challenging environment moving forward.

CASH						Excess cash position is being driven by our active underweight to international equities.

Indices are unmanaged. An investor cannot invest directly in an index. They are shown for illustrative purposes only, and do not represent the performance of any specific investment. Index returns do not include any expenses, fees or sales charges, which would lower performance.

The S&P 500® Index is a large-cap market index which measures the performance of a representative sample of 500 leading companies in leading industries in the U.S.

The Russell Midcap® Index measures the performance of the mid-cap segment of the U.S. equity universe.

The Russell 2000® Index measures the performance of the 2,000 smallest companies in the Russell 3000® Index, which represents approximately 11% of the total market capitalization of the Russell 3000® Index.

Russell Investment Group is the source and owner of the trademarks, service marks and copyrights related to the Russell Indexes. Russell® is a trademark of Russell Investment Group.

The MSCI EAFE (Europe, Australasia & Far East) Index is a free-float adjusted market capitalization index that is designed to measure developed market equity performance, excluding the U.S. and Canada.

The MSCI Emerging Markets Index captures large and mid cap representation across 24 Emerging Markets (EM) countries. With 1,138 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in each

The Bloomberg U.S. Aggregate Bond Index is a broad-based flagship benchmark that measures the investment grade, U.S. dollar-denominated, fixed-rate taxable bond market. The index includes Treasuries, government-related and corporate securities, mortgage backed securities, asset-backed securities and corporate securities, with maturities greater than 1 year.

The Bloomberg Commodity Total Return Index (BCOM) is composed of futures contracts and reflects the returns on a fully collateralized investment in the BCOM. This combines the returns of the BCOM with the returns on cash collateral invested in 13 week (3 Month) U.S. Treasury Bills.

The Bloomberg US Corporate High Yield Bond Index measures the USD-denominated, high yield, fixed-rate corporate bond market. Securities are classified as high yield if the middle rating of Moody's, Fitch and S&P is Ba1/BB+/BB+ or below. Bonds from issuers with an emerging markets country of risk, based on Barclays EM country definition, are excluded.

The Bloomberg US Intermediate Corporate Bond Index measures performance of United States dollar-denominated

investment grade, fixed-rate, taxable corporate bond securities with maturities greater than or equal to one year, but less than ten years, that are issued by U.S and non-U.S. industrial, utility and financial issuers.

Although the information in this report has been obtained from sources that the firm believes to be reliable, we do not guarantee its accuracy, and any such information may be incomplete or condensed. All opinions included in this report constitute the firm's judgment as of the date of this report and are subject to change without notice.

All investing involves risks including the possible loss of principal. There can be no assurance the asset allocation portfolios will achieve their investment objectives. The portfolios may invest in equities which are subject to market volatility. In addition to the general risk of investing, the portfolio is subject to additional risks including investing in bond and debt securities, which includes credit risk, prepayment risk and interest rate risk. When interest rates rise, bond prices generally fall. Securities rated below investment grade are more sensitive to economic, political and adverse development changes.

Equity risk is the risk that securities held by the fund will fluctuate in value due to general market or economic conditions, perceptions regarding the industries in which the issuers of securities held by the fund participate, and the particular circumstances and performance of particular companies whose securities the fund holds. In addition, while broad market measures of common stocks have historically generated higher average returns than fixed income securities, common stocks have also experienced significantly more volatility in those returns.

Commodity values can be very volatile. They can be impacted by world or local events, government regulations and economic conditions. Investments in commodities can lose value.

Each portfolio is subject to the risks and expenses of the underlying funds in direct proportion to the allocation of assets among the underlying funds.

Upon request, Madison may furnish to the client or institution a list of all security recommendations made within the past year.

Purchasing Managers' Index™ (PMI™) is a survey-based economic indicator designed to provide a timely insight into business conditions.

The Coincident Economic Activity Index includes four indicators: nonfarm payroll employment, the unemployment rate, average hours worked in manufacturing and wages and salaries.

The Eurozone Markit PMI Composite Index tracks business trends across both the manufacturing and service sectors, based on data collected from a representative panel of over 5,000 companies (60 percent from the manufacturing sector and 40 percent from the services sector). The index tracks variables such as sales, new orders, employment, inventories and prices. National data are included for Germany, France, Italy, Spain, Austria, the Netherlands, Greece and the Republic of Ireland. A reading above 50 indicates expansion in business activity and below 50 indicates that it is generally declining.

The federal funds rate is the target interest rate range set by the Federal Open Market Committee (FOMC) for banks to lend or borrow excess reserves overnight. It influences monetary and financial conditions, short-term interest rates, and the stock market.

The Magnificent Seven stocks are a group of high-performing and influential companies in the U.S. stock market: Alphabet, Amazon, Apple, Meta Platforms, Microsoft, NVIDIA, and Tesla. Bond Spread is the difference between yields on differing debt instruments of varying maturities, credit ratings, and risk, calculated by deducting the yield of one instrument from another.
