

# Weekly Mosaic – Revisions

Week of August 4<sup>th</sup>, 2025

## +3.0%

Real GDP, Quarter-over-Quarter, Seasonally Adjusted Annual Rate

Second quarter GDP came in well ahead of the anticipated +2.0%. A large portion of the surprise was driven by a material reversal in imports after the surge in the first quarter as consumers and businesses front ran tariffs.

## +0.26%

Core PCE Deflator, Month-over-Month

One of the Federal Reserve's favorite measures of inflation came in slightly lower than anticipated; however, both May and April core PCE readings were revised higher. The year-over-year measures of both headline and core inflation remain between 2% and 3%.

## 97.2

Consumer Confidence

Consumer Confidence moved higher, coming in ahead of an expected 95.0 and a previous reading of 95.2 as consumers' expectations for the near term improved despite their views of their present situation declining.

## Top of Mind

As anticipated, the Federal Reserve (Fed) did not cut interest rates last week, keeping the policy rate in a range of 4.25% to 4.50% and remaining steadfast in its wait-and-see approach to potential tariff impacts on inflation while viewing the labor market as stable.

By many measures, the labor market is in an ok place. Weekly initial jobless claims have remained at levels that aren't flashing imminent signs of weakness, while the unemployment rate has been range-bound between 4.0% and 4.3% for over a year.

The establishment survey data had been seen as showing signs of labor market strength as non-farm payrolls had been strong so far this year.

That perception was upended on Friday when the headline non-farm payrolls number printed at +73K for July, missing expectations of +104k. More concerning, the previous two months' readings were revised lower by a massive -258K.

Late last year, the Fed cut the policy rate by 1% on the presumption of a softening labor market. In turn, fixed income investors took note of Friday's payroll miss and revisions, sending rates lower across the curve as the probability of an interest rate cut at the Fed's next meeting in September leapt higher.

## Index Returns

As of 8/01/2025(%)	1-Week	QTD	YTD	1-Year	3-Year
S&P 500 TR	-2.34	0.61	6.85	16.06	16.59
Russell Mid Cap TR	-3.03	0.46	5.32	12.07	11.04
Russell 2000 TR	-4.16	-0.33	-2.11	0.47	6.34
MSCI EAFE NR	-3.13	-1.77	17.33	14.21	13.03

West Texas Crude (WTI) \$/bbl	67.35	68.66	59.67	72.84	77.74

# Current Positioning

Cautiously optimistic while intentionally avoiding some of the most expensive areas of the equity and credit markets.

	Min		Neutral		Max	
<b>EQUITIES</b>						Guarding against elevated levels of complacency and stretched valuations.
<b>U.S. Equity</b>						Relative advantages remain attractive; however, valuations have become less attractive. Our longstanding overweight to US equities relative to international equities remains.
Large						The balance sheet strength of many large cap companies remains attractive. However, their valuations are among the richest relative to other segments of US and international equities.
Mid						Absolute and relative valuations combined with a higher percentage of domestically driven supply chains and sales, combine to position mid-cap stocks attractive.
Small						Valuations continue to remain attractive against large caps and stand to benefit from less onerous regulations. Within small caps, we are focused on quality companies able to navigate an elevated interest rate environment.
Value						Overweight Energy and Financials while avoiding the cheapest valued companies, leading us away from deep value sectors and industries.
Growth						Driven by an underweight to Consumer Discretionary and Communication Services, neutral weight Technology.
<b>International</b>						International equity valuations are attractive and central banks around the world have largely shifted toward easing monetary policy.
Developed Markets						Overweight Japanese and Eurozone equities relative to benchmark.
Emerging Markets						Attractive valuations, global monetary easing, and stimulative measures in China, position emerging Asian equities to potentially benefit from multiple tailwinds.

<b>FIXED INCOME</b>						We believe opportunities within fixed income markets are attractive over the mid- to long-term time periods while recognizing volatility could persist over the short-term.
Duration						Slightly underweight duration as uncertainty around growth and inflation persist.
Treasury						Neutral US Treasuries, favor the securitized sector.
Corporate						Prefer short-term and intermediate-term investment grade corporate credit relative to long-term. High-quality bias remains with little value offered in the form of spreads across the high yield universe.
MBS/Securitized						Attractive relative yield, adequate spreads, and strong implied credit quality position the asset class attractively, specifically residential mortgages.

<b>ALTERNATIVES</b>						
Commodities						A persistent lack of a durable geopolitical risk premium, lower global trade, and slower global economic growth combine for a challenging environment for commodities moving forward.

<b>CASH</b>						Excess cash position is being driven by our active underweight to international equities.

## Mosaic by Madison Investments

Mosaic by Madison Investments represents Madison's global multi-asset product suite spanning the risk spectrum with a series of distinct portfolios across ETF/Mutual Fund and ETF mandates. Madison's Multi-Asset Solutions team has deep experience monitoring worldwide macroeconomic trends and their associated investment implications. Risk management and a commitment to consistency are key components of our philosophy and process. We believe that efficient asset allocation and downside volatility mitigation should lead to increased long-term client investment success.

## Multi-Asset Solutions Team

**Patrick Ryan, CFA**  
Chief Investment Strategist, Head of Multi-Asset Solutions, Portfolio Manager

**Stuart Dybdahl, CFA, CAIA**  
Portfolio Manager, Analyst

# Disclosures

"Madison" and/or "Madison Investments" is the unifying tradename of Madison Investment Holdings, Inc., Madison Asset Management, LLC ("MAM"), and Madison Investment Advisors, LLC ("MIA"). MAM and MIA are registered as investment advisers with the U.S. Securities and Exchange Commission. Madison Funds are distributed by MFD Distributor, LLC. MFD Distributor, LLC is registered with the U.S. Securities and Exchange Commission as a broker-dealer and is a member firm of the Financial Industry Regulatory Authority. The home office for each firm listed above is 550 Science Drive, Madison, WI 53711. Madison's toll-free number is 800- 767-0300.

Any performance data shown represents past performance. Past performance is no guarantee of future results.

Non-deposit investment products are not federally insured, involve investment risk, may lose value and are not obligations of, or guaranteed by, any financial institution. Investment returns and principal value will fluctuate.

This report is for informational purposes only and is not intended as an offer or solicitation with respect to the purchase or sale of any security and is not investment advice.

While Madison constructs portfolios for various risk tolerances, its Multi-Asset Solutions Team does not determine individual client's risk tolerance or investment objectives.

Indices are unmanaged. An investor cannot invest directly in an index. They are shown for illustrative purposes only, and do not represent the performance of any specific investment. Index returns do not include any expenses, fees or sales charges, which would lower performance.

The S&P 500® Index is a large-cap market index which measures the performance of a representative sample of 500 leading companies in leading industries in the U.S.

The Russell Midcap® Index measures the performance of the mid-cap segment of the U.S. equity universe.

The Russell 2000® Index measures the performance of the 2,000 smallest companies in the Russell 3000® Index, which represents approximately 11% of the total market capitalization of the Russell 3000® Index.

Russell Investment Group is the source and owner of the trademarks, service marks and copyrights related to the Russell Indexes. Russell® is a trademark of Russell Investment Group.

The MSCI EAFE (Europe, Australasia & Far East) Index is a free-float adjusted market capitalization index that is designed to measure developed market equity performance, excluding the U.S. and Canada.

The MSCI Emerging Markets Index captures large and mid cap representation across 24 Emerging Markets (EM) countries. With 1,138 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in each

The Bloomberg U.S. Aggregate Bond Index is a broad-based flagship benchmark that measures the investment grade, U.S. dollar-denominated, fixed-rate taxable bond market. The index includes Treasuries, government-related and corporate securities, mortgage backed securities, asset-backed securities and corporate securities, with maturities greater than 1 year.

The Bloomberg Commodity Total Return Index (BCOM) is composed of futures contracts and reflects the returns on a fully collateralized investment in the BCOM. This combines the returns of the BCOM with the returns on cash collateral invested in 13 week (3 Month) U.S. Treasury Bills.

The Bloomberg US Corporate High Yield Bond Index measures the USD-denominated, high yield, fixed-rate corporate bond market. Securities are classified as high yield if the middle rating of Moody's, Fitch and S&P is Ba1/BB+/BB+ or below. Bonds from issuers with an emerging markets country of risk, based on Barclays EM country definition, are excluded.

The Bloomberg US Intermediate Corporate Bond Index

measures performance of United States dollar-denominated investment grade, fixed-rate, taxable corporate bond securities with maturities greater than or equal to one year, but less than ten years, that are issued by U.S and non-U.S. industrial, utility and financial issuers.

Although the information in this report has been obtained from sources that the firm believes to be reliable, we do not guarantee its accuracy, and any such information may be incomplete or condensed. All opinions included in this report constitute the firm's judgment as of the date of this report and are subject to change without notice.

All investing involves risks including the possible loss of principal. There can be no assurance the asset allocation portfolios will achieve their investment objectives. The portfolios may invest in equities which are subject to market volatility. In addition to the general risk of investing, the portfolio is subject to additional risks including investing in bond and debt securities, which includes credit risk, prepayment risk and interest rate risk. When interest rates rise, bond prices generally fall. Securities rated below investment grade are more sensitive to economic, political and adverse development changes.

Equity risk is the risk that securities held by the fund will fluctuate in value due to general market or economic conditions, perceptions regarding the industries in which the issuers of securities held by the fund participate, and the particular circumstances and performance of particular companies whose securities the fund holds. In addition, while broad market measures of common stocks have historically generated higher average returns than fixed income securities, common stocks have also experienced significantly more volatility in those returns.

Commodity values can be very volatile. They can be impacted by world or local events, government regulations and economic conditions. Investments in commodities can lose value.

Each portfolio is subject to the risks and expenses of the underlying funds in direct proportion to the allocation of assets among the underlying funds.

Upon request, Madison may furnish to the client or institution a list of all security recommendations made within the past year.

The Personal Consumption Expenditures Price Index is a measure of the prices that people living in the United States, or those buying on their behalf, pay for goods and services.

The Conference Board Consumer Confidence Index measures the level of consumer confidence in economic activity. It's a leading indicator as it can predict consumer spending, which plays a major role in overall economic activity. A value above 100 indicates an increase in consumer confidence and the chance that consumers will spend money on major purchases in the next year. A value below 100 indicates negative economic developments as consumers are likely to save their money.

Yield Curve is a line that plots yields (interest rates) of bonds having equal credit quality but differing maturity dates. The slope of the yield curve gives an idea of future interest rate changes and economic activity. There are three main types of yield curve shapes: normal (upward-sloping curve), inverted (downward-sloping curve), and flat.

The federal funds rate is the target interest rate range set by the Federal Open Market Committee (FOMC) for banks to lend or borrow excess reserves overnight. It influences monetary and financial conditions, short-term interest rates, and the stock market.

Bond Spread is the difference between yields on differing debt instruments of varying maturities, credit ratings, and risk, calculated by deducting the yield of one instrument from another.
